

ESE Parental Guide to Understanding Teletherapy

Teletherapy is the online delivery of speech, occupational, and physical therapy services via high-resolution, live video conferencing. Teletherapy sessions are very similar to traditional therapy sessions with one major exception: instead of sitting in the same room, students and therapists interact via live video conferencing in a virtual environment. Research indicates teletherapy is equally as productive as face-to-face instruction.

Free Appropriate Public Education (FAPE) is provided but the mode of therapy is changing:

Teletherapy can include:

- Typical therapy sessions via computer
- Programs/activities put on screen
- Virtually guided worksheet or activity

Use of Technology for Teletherapy:

- Google Classroom and Google Meet are the district-approved, secure platforms to complete therapy sessions
 - We recommend using the one-to-one technology provided by the district
 - Make sure you have a strong internet connection
 - Please find a quiet space for learning that will be used each time a session occurs
-

Scheduling:

- Your child's therapist will contact you to schedule therapy sessions
 - You should receive information in your email for the session time
-
